Prodigy Commissary Admin Redesign

Issues found in the current admin software (admin-test.prodigycommissary.com) and how the working mockup addresses each one. The mockup is at github.com/wynnchance/Prodigy-Commissary (docs/app.html).

Navigation and shell

#	Original (current test site)	Redesign (working mockup)
1	One flat sidebar of 20+ database tables (Residents, Transactions, Batches, Source Mediums, Class Codes, Kiosks...) with no grouping.	Navigation grouped by job per role. An officer sees Home, Find inmate, New inmate, Receipts and nothing else.
2	No home page. Login lands on a list.	Each role has a home: officer gets search and recent bookings, manager gets today's close-out checklist, admin gets the approvals queue, auditor gets the report library.
3	Every user sees every screen, including Prodigy accounting views.	Six roles with separate views: Officer, Manager, Jail Administrator, Auditor, Prodigy Support, Prodigy Accounting. Permissions enforced in the shell, not just hidden menus.
4	Facility is picked inside forms and lists, and each list defaults to all facilities.	Jail logins are locked to one facility shown in the header. Only Prodigy roles get a facility selector and "view as" into a jail role.
5	Search is per-list and per-column.	One global search by name, booking number, or account number.

Officer: booking deposits and account work

#	Original (current test site)	Redesign (working mockup)
6	Deposit is "Create Transaction" with Account to Bill, Source Medium, Transaction Type, and GL account dropdowns.	Deposit button on the inmate page. Pick cash, check, or card, enter amount, done. Ledger mapping happens behind the scenes.
7	No check hold. A check posts like cash.	Check tender has a hold period (facility default, editable) and shows held vs available on the receipt.
8	Card entry has no save option and no fee handling.	Card tender charges the facility fee, shows the net, and offers "save card for phone deposits" when the facility has a processor.
9	Correcting a mistake means voiding and re-keying a new transaction with the right accounts.	Fix button on every transaction: move to another inmate, change amount, void, release or extend hold. Posts reversing entries, original never edited, corrected receipt prints.

#	Original (current test site)	Redesign (working mockup)
10	Billing an inmate (medical, damage) uses the same ledger form.	"Bill inmate" with the facility's charge types. Charges hit available first; the remainder shows as owed and nets against the next deposit.
11	Balance shown as a single number. Held checks and debts are invisible.	Three numbers always visible: Available, On hold, Owed.
12	No manual create path if the JMS feed is down.	New inmate form with duplicate check by name and date of birth.
13	Receipt printing is a separate report.	Receipt prints at the end of every deposit, charge, and fix.

Manager: daily money handling

#	Original (current test site)	Redesign (working mockup)
14	"Cash Drawers" is actually kiosk hardware configuration.	Drawer count is a real close-out step: expected vs counted, Over/Short, second verifier initials.
15	Bank deposit is not a workflow. The manager reconstructs it from the Transactions list.	Bank deposit builder pulls today's undeposited cash and checks, prints the slip, and "mark deposited" stamps every item.
16	No monthly reconciliation.	Reconciliation page per month: book vs bank, outstanding checks, difference explained, sign-off.
17	Release payout is a withdrawal transaction with no controls.	Release queue with signed-form gating, option to include held funds, check or cash payout, unclaimed and letter paths.
18	Orders and batches shown as database rows. Failed batches show raw GUIDs and "Failure".	Cart approve/deny with reasons, posting, commissary transfer with approval, refunds. Errors say why and offer Retry or Contact support.

Jail Administrator

#	Original (current test site)	Redesign (working mockup)
19	Settings are one 7-screen facility page with 60+ unexplained checkboxes.	Settings split into sections (Charges, Approvals, Deposits, Releases, Setup) with a jump list and per-section Save. Every checkbox has a plain-language line.
20	No approval workflow.	Approvals queue. Thresholds (deposits over $X, fixes, transfers, write-offs) change what an officer can do.

#	Original (current test site)	Redesign (working mockup)
21	Users are a flat admin list with no roles or end dates.	Staff and auditor logins with roles, facility, and start/end dates for auditors.
22	No activity log aimed at a jail administrator.	Activity log of who did what, filterable.

Auditor

#	Original (current test site)	Redesign (working mockup)
23	No auditor view. Reports are scattered under Reports and Transactions with ledger filters.	16 reports mapped to Oklahoma and Texas trust fund requirements, each with date filter, CSV, print, email. One-click audit packet.
24	No record of what was pulled.	Every report run is logged with who, when, and parameters.
25	Ledger editable by anyone with access.	Read-only ledger for auditors.

Tables, status, and errors (everywhere)

#	Original (current test site)	Redesign (working mockup)
26	Tables overflow horizontally at 1366px. Actions column scrolls off screen.	Fits 1366px with no horizontal scroll. Secondary columns behind a column picker. Actions always visible.
27	Icon-only action buttons with no labels.	Labeled buttons. No icon-only controls.
28	Combined statuses like "Open + Voided".	One colored chip, one word.
29	Empty lists and disabled buttons with no explanation.	Empty states and disabled buttons say what to do next.
30	Ledger terms (Source Medium, Accounts Payable, Over/Short GL) on every screen.	Ledger terms appear only on Prodigy Accounting screens.
